

I Claim:

1. A remote control bobber comprising:
a housing that is buoyant in water;
5 a motor mounted within the housing having a shaft that extends through the housing;
a propeller mounted on the shaft outside the housing;
a receiver mounted within the housing, the receiver including an antenna and a control
circuit to control the motor; and
a power supply connected to the motor and the receiver.

10 2. The remote control bobber of claim 1 wherein the housing includes a
mounting structure capable of attachment to a line.

15 3. The remote control bobber of claim 1 wherein a second motor is mounted
within the housing having a second shaft that extends through the housing and a second
propeller is mounted on the second shaft.

20 4. The remote control bobber of claim 1 wherein a transmitter activated by a
user controls the receiver.

5. The remote control bobber of claim 3 wherein the motors are separately
controllable.

25 6. The remote control bobber of claim 1 wherein the housing has a rudder that
is controlled by a servo contained within the housing.

7. The remote control bobber of claim 1 wherein the housing is spherical.
